

An abstract graphic design featuring a large, stylized letter 'N' composed of a red bar and a blue outline. The 'N' is positioned on the left side of the page. To the right of the 'N', there is a large, dark blue curved shape that resembles a quarter-circle or a stylized 'C'. The background is white.

SOILCON

SOILCON a company formed in 2012, which specializes in consulting and training services in the field of **special foundations**.

We have been working in this field since 1980; the expertise and skills acquired during the execution of our worldwide contracts for consolidations works, particularly in jet grouting and piling techniques, has prompted us to make our knowledge available to other Companies operating in the same field, General Contractors, Private and Public Entities that may need our expertise.

The specificity of the market, its modern evolution and above all our passion for this type of work, encouraged us to take the opportunity to examine our past contracts in a critical and constructive way, allowing us to further improve our techniques; ensuring that we take into the future the very best of our expertise and knowledge.

SOILCON...START ON **SOLID BASES!**

ARE YOU A COMPANY OPERATING IN THE FIELD OF SPECIAL FOUNDATIONS?

Do you have a development project that needs a particular foundation technique (such as Jet Grouting), but don't want to venture into executing the contract without strong technical/executive help?

Or...

Do you have a particular difficult project and you would like to have technical/executive support for works execution or for the trials and test field in order to obtain a satisfactory result?

Or...

You have recently formed your business and would like to train your technical or operating crew to use site equipment (such as pumps, mixing plants, measuring and controlling instruments) or in controlling works operations?

SOILCON can help you and be by your side on your journey with:

- Advice on equipment and tools to perform the techniques
- Training of site technicians to be able to check the executed works
- Training of the site crew for the execution of the work.
- Finding - if necessary - temporary specialized workers to perform the work.
- Technical support (choice of parameters, test fields, etc.) and/or design.

ARE YOU A GENERAL CONTRACTOR?

As part of your project, are you dealing with a non-familiar consolidation technique and you would like to have more control over this critical phase of processing?

SOILCON can supply:

- Consulting and advice on the choice of the executing company or partner
- Training your technicians on the specific controls of the critical phases of the process
- External technical staff (if you don't have any) who can follow the entire process
- Technical support in the preliminary stages of processing (trials, test, etc.) in order to validate the sub-contractor's operating choices and/or modify them.

ARE YOU A REAL ESTATE INVESTMENT COMPANY PRIVATE OR PUBLIC?

Do you have a construction, renovation or real estate investment project on specific land?

Would you like to be supported by a Consultant helping you to organize the execution of the preliminary geological survey and in the choice of the best deep foundations technique, leaving you free to deal with the financial and business matters?

SOILCON can supply:

- Consulting on the choice of sub-contractors and in the optimization of the budget for soil tests and geological survey
- Advice in choosing the most suitable foundation methods and excavation protection techniques (for creation of underground parking), ensuring the best options for your budget!
- Support in selection of the subcontractors
- Basic or advanced process control, including on your behalf, maintaining a relationship with the subcontractor.
